Score: 600

Tuesday - 2024 30 July

Exercises 5

Deadline: 2024 15 August

Score: 100

Tuesday - 2024 06 August

Question 01 (List)

100

Create a Python program that first prompts the user to enter 10 numbers, which are then stored in a list. Subsequently, request the user to input a new number. If this new number is present in the list, remove all occurrences of it. If it's not found, insert the number twice at the beginning of the list. Finally, display the modified list to the user.

Exercises 6

Deadline: 2024 15 August

Score: 500

Tuesday - 2024 06 August

Question 01 (Project)

500

Create a Python program that allows a user to manage tasks, track the time spent on them, and mark them as done or undone.

- A task has a name, a status (True, False), and a duration (in hours).
- The data will be stored across three lists: one for task names, one for task statuses, and one for task durations.

Add Task

- Add a new task to the list.
- Initially, the status is False, and the duration is set to None.
- Task names are unique.

Question 01 (Project)

Display all products

- Display all data by details (task, status, duration)

Display all products

- Display all data by details (task, status, duration)

Remove Task

- Remove a task from the list based on its name.

Edit Task

- Edit the name of an existing task.

Search Task

- Search for a task by name and display its details.

Question 01 (Project)

Mark Task as Done

- Mark a task as done and record the time duration it took to complete
- For time you have to get start and end time then calculate their difference

Display Details

- Show details of all tasks, including the number of tasks, hours worked, and the number of completed tasks, as well as the number of uncompleted tasks.

Help

- Display a help message showing information on how to use each command.

Point: The program should repeat at most two hundred times unless the user writes exit.
